## Description of Reporting Variables

## Region

Each sample school and teacher was classified as belonging to 1 of 4 census regions.

- Midwest: IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI
- Northeast: CT, MA, ME, NH, NJ, NY, PA, RI, VT
- South: AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, SC, TN, VA, WV
- West: AK, AZ, CA, CO, HI, ID, MT, NM, NV, OK, OR, TX, UT, WA, WY

## Type of Community

Each sample school and teacher was classified as belonging to one of three types of communities.

- Urban: Central city
- Suburban: Area surrounding a central city, but still located within the counties constituting a Metropolitan Statistical Area (MSA)
- Rural: Area outside any MSA

## Percent of Students in School Eligible for Free/Reduced-Price Lunch

Each school was classified into one of four categories based on the proportion of students eligible for free/reduced-price lunch (FRL). Defining common categories across grades K-12 would have been misleading, as students tend to select out of the FRL program as they advance in grade due to perceived social stigma. Therefore, the categories were defined as quartiles within groups of schools serving the same grades (e.g., schools with grades $\mathrm{K}-5$, schools with grades 6-8).

## School Size

Schools were classified into one of four categories based on the number of students served in the school. Defining common categories across grades K-12 would have been misleading, as
average school size tends to increase from elementary to middle to high school. Therefore, the categories were defined as quartiles within groups of schools serving the same grades (e.g., schools with grades $\mathrm{K}-5$, schools with grades $6-8$ ).

## Grade Range

Teachers were classified by grade range according to the information they provided about their teaching schedule. Most of the analyses in this report used elementary, middle, and high with teachers and classes being categorized based on the grade range information provided by the teacher. Elementary was defined as grades $\mathrm{K}-5$ plus $6^{\text {th }}$ grade self-contained; middle was defined as $6^{\text {th }}$ grade non-self-contained and grades $7-8$; high was defined as grades 9-12.

## Percent of Non-Asian Minority Students in Class

Each randomly selected class was classified into one of four categories based on the proportion of students in the class identified as non-Asian minorities. As this proportion is similar in schools regardless of grades served, the categories were defined as quartiles across all classes.

## Overview of Composites

To facilitate the reporting of large amounts of survey data, and because individual questionnaire items are potentially unreliable, HRI used factor analysis to identify survey questions that could be combined into "composites." Each composite represents an important construct related to mathematics or science education. Composites were calculated for both the science and mathematics versions of the teacher questionnaire and for the program questionnaire completed by each responding school in the sample.

Each composite is calculated by summing the responses to the items associated with that composite and then dividing by the total points possible. In order for the composites to be on a 100-point scale, the lowest response option on each scale was set to 0 and the others were adjusted accordingly; so for example, an item with a scale ranging from 1 to 4 was re-coded to have a scale of 0 to 3 . By doing this, someone who marks the lowest point on every item in a composite receives a composite score of 0 rather than some positive number. It also assures that 50 is the true mid-point. The denominator for each composite is determined by computing the maximum possible sum of responses for a series of items and dividing by 100; e.g., a 9 -item composite where each item is on a scale of $0-3$ would have a denominator of 0.27 . Composites values were not computed for participants who respond to fewer than two-thirds of the items that form the composite.

The composites were derived through a multi-stage process. As a first step, to test whether the items intended to target the same underlying construct indeed showed similar response patterns, an exploratory factor analysis was conducted on a subset of the data. (The complete dataset was
split randomly into two subsets to allow for independent exploratory and confirmatory factor analyses.) Using Mplus version 6 and applying the appropriate weights (teacher, class, or school weights), several different factor solutions were produced and scree plots, eigenvalues, and factor patterns were examined. Based on item fit and conceptual coherence, preliminary composite definitions were created. Next, the preliminary composite definitions were applied to a different subset of the data and a confirmatory factor analysis was performed, again using Mplus. When analyzing data from a complex sample design, Mplus provides only two fit indices to evaluate the model: the root mean square error of approximation (RMSEA), and the standardized root mean square residual (SRMR). The psychometric literature provides multiple criteria for judging acceptable model fit using these indices, ranging from 0.05-0.10 for both the RMSEA and SRMR. ${ }^{1}$ The obtained values from final models ${ }^{2}$ are presented in the tables, allowing the reader to apply his or her preferred criteria for evaluating fit. Lastly, to further aid in the assessment of the composites, Cronbach's coefficient alpha, a common measure of reliability, was calculated and is presented in the tables. An alpha of $0.6-0.8$ is evidence of moderate reliability and a value over 0.8 is considered evidence of strong reliability.

## Definitions of Teacher Composites

Composite definitions for the science and mathematics teacher questionnaire are presented below along with the item numbers from the respective questionnaires. Composites that are identical for the two subjects are presented in the same table; composites unique to a subject are presented in separate tables.

[^0]
## Teacher Background and Opinions

These composites estimate the extent to which teachers feel prepared in both science and mathematics content and pedagogy.

Table E-1
Quality of Professional Development ${ }^{\dagger}$

|  | Science | Mathematics |
| :--- | :---: | :---: |
| You had opportunities to engage in science investigations $^{\ddagger}$ | Q32a |  |
| You had opportunities to engage in mathematics investigations ${ }^{\ddagger}$ |  | Q20a |
| You had opportunities to examine classroom artifacts (e.g., student work samples) | Q32b | Q20b |
| You had opportunities to try out what you learned in your classroom and then talk about <br> it as part of the professional development | Q32c | Q20c |
| You worked closely with other science teachers from your school ${ }^{\ddagger}$ | Q32d |  |
| You worked closely with other mathematics teachers from your school ${ }^{\ddagger}$ |  | Q20d |
| You worked closely with other science teachers who taught the same grade and/or <br> subject whether or not they were from your school |  |  |
| You worked closely with other mathematics teachers who taught the same grade and/or <br> subject whether or not they were from your school | Q32e |  |
| The professional development was a waste of your time ${ }^{\xi}$ |  | Q20e |
| Number of Items in Composite | Q32f | Q20f |
| Reliability - Cronbach's Coefficient Alpha | $\mathbf{6}$ | $\mathbf{6}$ |
| Confirmatory Factor Analysis Fit Index - RMSEA | $\mathbf{0 . 0 7}$ | $\mathbf{0 . 7 5}$ |
| Confirmatory Factor Analysis Fit Index - SRMR | $\mathbf{0 . 0 3}$ | $\mathbf{0 . 0 9}$ |

These items were presented only to teachers who participated in science/mathematics-related professional development in the last three years.
\# The science and mathematics versions of this item are considered equivalent, worded appropriately for that discipline.
§ Responses were flipped when computing the composite to account for the negative polarity of the item.

## Definitions of Program Composites

Composite definitions for the science and mathematics program questionnaire are presented below along with the item numbers from the respective questionnaires. Composites that are identical for the two subjects are presented in the same table; composites unique to a subject are presented in separate tables.

## State Standards for Science and Mathematics Education

These composites estimate the level of attention to state standards given by teachers and other stakeholders.

Table E-17
Focus on State Science/Mathematics Standards

|  | Science | Mathematics |
| :---: | :---: | :---: |
| State science standards have been thoroughly discussed by science teachers in this school ${ }^{\ddagger}$ | Q6a |  |
| State mathematics standards have been thoroughly discussed by mathematics teachers in this school ${ }^{\ddagger}$ |  | Q6a |
| There is a school-wide effort to align science instruction with the state science standards ${ }^{\ddagger}$ | Q6b |  |
| There is a school-wide effort to align mathematics instruction with the state mathematics standards ${ }^{\ddagger}$ |  | Q6b |
| Most science teachers in this school teach to the state standards ${ }^{\ddagger}$ | Q6c |  |
| Most mathematics teachers in this school teach to the state standards ${ }^{\ddagger}$ |  | Q6c |
| Your district/diocese organizes science professional development based on state standards ${ }^{\dagger}$ キ | Q6d |  |
| Your district/diocese organizes mathematics professional development based on state standards ${ }^{\dagger}$ キ |  | Q6d |
| Number of Items in Composite | 4 | 4 |
| Reliability - Cronbach's Coefficient Alpha | 0.81 | 0.84 |
| Confirmatory Factor Analysis Fit Index - RMSEA | 0.08 | 0.06 |
| Confirmatory Factor Analysis Fit Index - SRMR | 0.02 | 0.01 |

This item was presented only to teachers in public and Catholic schools.
$\ddagger$ The science and mathematics versions of this item are considered equivalent, worded appropriately for that discipline.

Figure E-38

Figure E-39

## Factors Affecting Instruction

These composites estimate the extent to which various factors impact science/mathematics instruction in schools.

Table E-18
Supportive Context for Science/Mathematics Instruction

|  | Science | Mathematics |
| :---: | :---: | :---: |
| District/Diocese science professional development policies and practices ${ }^{\text {T, }}$ | Q32a |  |
| District/Diocese mathematics professional development policies and practices ${ }^{\dagger+} \ddagger$ |  | Q20a |
| Time provided for teacher professional development in science ${ }^{\ddagger}$ | Q32b |  |
| Time provided for teacher professional development in mathematics ${ }^{\ddagger}$ |  | Q20b |
| Importance that the school places on science ${ }^{\ddagger}$ | Q32c |  |
| Importance that the school places on mathematics ${ }^{\ddagger}$ |  | Q20c |
| Public attitudes toward science instruction ${ }^{\ddagger}$ | Q32d |  |
| Public attitudes toward mathematics instruction ${ }^{\ddagger}$ |  | Q20d |
| Conflict between efforts to improve science instruction and other school and/or district/diocese initiatives ${ }^{\ddagger}$ | Q32e |  |
| Conflict between efforts to improve mathematics instruction and other school and/or district/diocese initiatives ${ }^{\ddagger}$ |  | Q20e |
| How science instructional resources are managed (e.g., distributing and refurbishing materials) | Q32f |  |
| Equipment and supplies and/or manipulatives for teaching mathematics (e.g., materials for students to draw, cut and build in order to make sense of problems) |  | Q20f |
| Number of Items in Composite | 6 | 6 |
| Reliability - Cronbach's Coefficient Alpha | 0.78 | 0.75 |
| Confirmatory Factor Analysis Fit Index - RMSEA | 0.10 | 0.06 |
| Confirmatory Factor Analysis Fit Index - SRMR | 0.03 | 0.02 |

${ }^{\dagger}$ This item was presented only to teachers in public and Catholic schools.
$\ddagger$ The science and mathematics versions of this item are considered equivalent, worded appropriately for that discipline.

Figure E-40

Figure E-41

Table E-19
Extent to Which a Lack of Materials and Supplies Is Problematic

|  | Science | Mathematics |
| :--- | :---: | :---: |
| Lack of science facilities (e.g., lab tables, electric outlets, faucets and sinks in <br> classrooms) | Q 33 a | - |
| Inadequate funds for purchasing science equipment and supplies ${ }^{\ddagger}$ | Q 33 b |  |
| Inadequate funds for purchasing mathematics equipment and supplies ${ }^{\ddagger}$ |  | Q21a |
| Inadequate supply of science textbooks/modules $^{\ddagger}$ | Q 33 c |  |
| Inadequate supply of mathematics textbooks/programs $^{\ddagger}$ |  | Q21b |
| Inadequate materials for individualizing science instruction $^{\ddagger}$ | Q 33 d |  |
| Inadequate materials for individualizing mathematics instruction $^{\ddagger}$ |  | Q21c |
| Number of Items in Composite | $\mathbf{4}$ | $\mathbf{3}$ |
| Reliability - Cronbach’s Coefficient Alpha | $\mathbf{0 . 7 6}$ | $\mathbf{0 . 7 5}$ |
| Confirmatory Factor Analysis Fit Index - RMSEA | $\mathbf{0 . 0 7}$ | $\mathbf{0 . 0 6}$ |
| Confirmatory Factor Analysis Fit Index - SRMR | $\mathbf{0 . 0 4}$ | $\mathbf{0 . 0 5}$ |

$\ddagger$ The science and mathematics versions of this item are considered equivalent, worded appropriately for that discipline.

Figure E-42

Figure E-43

Table E-20
Extent to Which Student Issues Are Problematic

|  | Science | Mathematics |
| :--- | :---: | :---: |
| ${\text { Low student interest in science }{ }^{\ddagger}}^{\text {Low student interest in mathematics }}{ }^{\ddagger}$ | Q33e |  |
| Low student reading abilities |  | Q21d |
| Large class sizes | Q33f | Q21e |
| High student absenteeism | Q33m | Q21l |
| Inappropriate student behavior | Q33n | Q21m |
| Number of Items in Composite | Q33o | Q21n |
| Reliability - Cronbach's Coefficient Alpha | $\mathbf{5}$ | $\mathbf{5}$ |
| Confirmatory Factor Analysis Fit Index - RMSEA | $\mathbf{0 . 7 6}$ | $\mathbf{0 . 7 8}$ |
| Confirmatory Factor Analysis Fit Index - SRMR | $\mathbf{0 . 0 7}$ | $\mathbf{0 . 0 6}$ |

The science and mathematics versions of this item are considered equivalent, worded appropriately for that discipline.

Figure E-44

Figure E-45

Table E-21
Extent to Which Teacher Issues Are Problematic

|  | Science | Mathematics |
| :--- | :---: | :---: |
| Lack of teacher interest in science $^{\ddagger}$ | Q33g |  |
| Lack of teacher interest in mathematics $^{\ddagger}$ |  | Q21f |
| Inadequate teacher preparation to teach science $^{\ddagger}$ | Q33h |  |
| Inadequate teacher preparation to teach mathematics ${ }^{\ddagger}$ |  | Q21g |
| Number of Items in Composite | $\mathbf{2}$ | $\mathbf{2}$ |
| Reliability - Cronbach’s Coefficient Alpha | $\mathbf{0 . 7 5}$ | $\mathbf{0 . 7 0}$ |
| Confirmatory Factor Analysis Fit Index - RMSEA | $\mathbf{0 . 0 7}$ | $\mathbf{0 . 0 6}$ |
| Confirmatory Factor Analysis Fit Index - SRMR | $\mathbf{0 . 0 4}$ | $\mathbf{0 . 0 5}$ |

$\ddagger$ The science and mathematics versions of this item are considered equivalent, worded appropriately for that discipline.

Figure E-46

Figure E-47

Table E-22
Extent to Which a Lack of Time Is Problematic

|  | Science | Mathematics |
| :--- | :---: | :---: |
| Insufficient time to teach science $^{\ddagger}$ | Q 33 i |  |
| Insufficient time to teach mathematics $^{\ddagger}$ |  | Q21h |
| Lack of opportunities for science teachers to share ideas $^{\ddagger}$ | Q33j |  |
| Lack of opportunities for mathematics teachers to share ideas $^{\ddagger}$ |  | Q21i |
| Inadequate science-related professional development opportunities $^{\ddagger}$ | Q33k |  |
| Inadequate mathematics-related professional development opportunities |  |  |
| Number of Items in Composite |  | Q21j |
| Reliability - Cronbach’s Coefficient Alpha | $\mathbf{3}$ | $\mathbf{3}$ |
| Confirmatory Factor Analysis Fit Index - RMSEA | $\mathbf{0 . 6 5}$ | $\mathbf{0 . 6 1}$ |
| Confirmatory Factor Analysis Fit Index - SRMR | $\mathbf{0 . 0 7}$ | $\mathbf{0 . 0 6}$ |

The science and mathematics versions of this item are considered equivalent, worded appropriately for that discipline.

[^0]:    ${ }^{1}$ Browne, M.W., \& Cudeck, R. (1992). Alternative ways of assessing model fit. Sociological Methods \& Research, 21, 230-258.
    Hu, L., \& Bentler, P.M. (1999). Cutoff criteria for fi $t$ indexes in covariance structure analysis: Conventional criteria versus new alternatives. Structural Equation Modeling, 6, 1-55.

    Marsh, H.W., Wen, Z., \& Hau, K-T. (2004). Structural equation models of latent interactions: Evaluation of alternative estimation strategies and indicator construction. Psychological Methods, 9, 275-300.
    ${ }^{2}$ Final models were occasionally adjusted to allow for correlated errors among individual items, typically when the items were worded similarly and the modification indices suggested that the proposed correlations would lead to substantially better fit. Multi-factor models were used in situations when a single-factor specification would result in an over-identified model.
