NSF ITEST Solicitation Webinar #1:
“Solicitation Overview”
Wednesday, June 30, 2021
12-1 pm ET
STEM Learning & Research Center (STELAR)

• Resource center for NSF’s *Innovative Technology Experiences for Students and Teachers (ITEST)* Program

• STELAR assists both ITEST grantees and those interested in submitting a proposal

• Cross-resource center activities link STELAR to other NSF Programs
What STELAR does:

- Facilitate projects’ success through **technical support**
- Inform and influence the field by **disseminating ITEST project findings** through project syntheses
- Deepen the impact and reach of the program by **broadening participation in the ITEST portfolio**
Resources STELAR provides:

**Resource Library**
- Publications
- Instruments
- Curricular Materials
- Videos

**Proposal Development**
- Get to Know ITEST
- Prepare Your Proposal for Submission
- Develop a Robust Research Design
- Create an Effective Evaluation Strategy
- Connect with Partners
- Reach Underserved Populations
- Develop the Workforce of the Future

**ITEST Project Profiles**
- All Projects A-Z
- Bioscience
- Computer Science
- Engineering
- Environmental Science
- Mathematics
For more information:

- Email the team at STELAR@edc.org
- Join the STELAR mailing list: https://go.edc.org/STELAR-MailingList
- Follow us on Twitter: @STELAR_CTR
Innovative Technology Experiences for Students and Teachers (ITEST): Solicitation 19-583

Gavin Fulmer, Robert Russell and Alicia Santiago Program Officers, Division of Research on Learning

Presenters

Gavin Fulmer, Program Officer, EHR/DRL
Alicia Santiago, Program Officer, EHR/DRL
Robert Russell, Program Officer, EHR/DRL
ITEST Program

ITEST is an applied research and development program designed to broaden participation in STEM/ICT careers and career pathways through providing pre-K through 12th grade youth with technology-rich learning experiences in formal or informal settings.
Laying the Groundwork

Key Definitions and Parameters
STEM-Related Workforce Fields

- Traditional STEM disciplines
- Information and Communications Technology (ICT)
- Computing, Computer Science, Data Analytics, Data Science, Artificial Intelligence, and related fields
- Professionals at all levels, including technicians, technologists, scientists, engineers, computer scientists, and mathematicians
- *STEM teachers are a part of the STEM workforce!*

Section I
What makes it an ITEST project?

- ...research on innovative learning experiences that strengthen knowledge of and interest in STEM with an emphasis on careers and career pathways
- ...directly engages PreK-12 learners using technology
- ...grounded in relevant research
- ...contains explicit strategies to broaden participation of underrepresented and/or underserved populations in STEM careers and career pathways.
ITEST Projects: Overview

- Build on fundamental research and STEM education development literature and practice
- Advance the field through the development of innovative leaning and teaching using technologies, research, assessment, resources, models and tools
- Have rigorous research and development plans
- Generate knowledge through research, development, & evaluation, asking “what is happening,” “to what extent,” “why,” “how,” “what works for whom,” and “under what circumstances”
- Identify learning outcomes
- Audience: Public and/or Professional
Other Important Considerations

• Examples of possible cognitive outcomes
  • Knowledge and understanding of STEM content
  • Knowledge and understanding of STEM careers
  • Understanding of STEM career pathways

• Examples of possible socio-emotional outcomes
  • Dispositions towards STEM fields and disciplines
  • Interest in STEM careers and career pathways
  • Motivation to pursue further STEM learning
  • Identities in STEM
Other Important Considerations

• Innovative use of technology
  • A new cutting-edge technology not previously used in formal or informal education settings
  • An innovative educational use of an existing technology
  • Technologies should be clearly related to preparation for STEM careers or career pathways

• Engaging learners through partnerships in formal or informal settings

• Collaborations between researchers and practitioners in STEM disciplines, STEM education, career development, psychology, sociology, anthropology, or other fields related to the project
Project Types
# Project Types

<table>
<thead>
<tr>
<th>Exploring Theory and Design Principles (ETD)</th>
<th>Designing and Testing Innovations (DTI)</th>
<th>Scaling, Expanding, and Iterating Innovations (SEI)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 3 years</td>
<td>Up to 4 years</td>
<td>Up to 5 years</td>
</tr>
<tr>
<td>Up to $400,000</td>
<td>Up to $1,500,000</td>
<td>Up to $3,000,000</td>
</tr>
</tbody>
</table>

- Investigate conditions in the field
- Explore factors intended to increase knowledge and interest
- Research should build and advance theory, produce design principles or frameworks for innovations

- Design and test or implement the innovation
- Analyze outcomes
- Research should attend to how the design principles influence knowledge and interest in STEM careers or pathways

- Broaden an innovation at a significant scale (5-10x original)
- Extend innovation to new student populations, regions, ages, contexts
- Research should attend to transferability and generalizability and factors related to scale

Additional types: Conference, 1 year, $100,000; Synthesis, 2 years, $300,000
Thoughts on Developing Projects

• Consider the balance between research and development
• Consult the IES/NSF Common Guidelines
  • ETD: Type 2; DTI: Type 3; SEI: Types 4, 5, and 6
• Projects must have high-quality research design, project evaluation, and dissemination of findings
High-Quality Research Design

- Research questions grounded in scholarly literatures
  - theory-oriented
  - explain the relation between the innovation's design features and the impacts on knowledge and interest in preparation for STEM careers

- Plans for collecting quantitative and/or qualitative data
  - relevant for addressing the research questions
  - cognitive outcomes
  - social-emotional outcomes

- Well-defined analytical methods appropriate to address the research questions
Project Evaluation

What steps will the project take to provide feedback on the work, both formatively and summatively?

• Articulation of evaluation questions related to the scope of work
• Delineation of activities and data to be undertaken
• Description of how the project will use evaluation findings

*The form of evaluation is not prescribed. External evaluators and/or advisory boards can serve this purpose. The expertise, questions, and activities/data are the most critical components.*
Dissemination of Findings

A creative communication strategy for reaching broad audiences with project findings.

• Elements of the communication plan
  • Target audiences
  • Channels
  • Technologies/aspects of the innovation

• Dissemination appropriate to the partnership audience
  • Publications
  • Presentations
  • Materials
Designing Innovations that Meet ITEST Program Goals
Five Key Components

• Innovative Use of Technologies
• Innovative Learning Experiences
• STEM Workforce Development
• Strategies for Broadening Participation
• Strategic Partnerships
Innovative Use of Technologies

• Using new or leading-edge technologies
• Using existing technologies in innovative ways

On the student side, this should include:

• Details about how learners will be directly interacting with the technology
• Measurement of the ways in which the technology experience influences cognitive and socio-emotional learning outcomes
• Explain how the technologies used are developmentally and age appropriate
Innovative Learning Experiences

Describe the innovation and the key aspects of the design.

Make connections to the research literature, and explain how it advances this literature.

Demonstrate how the design builds knowledge and interest in preparation for STEM careers.

Be clear about the roles for all stakeholders and how they relate to the overall timeline.
STEM Workforce Development

- Connecting workforce learning environments to PreK-12 learning opportunities
- Making the connection to knowledge of and interest in workforce pathways – not just building STEM knowledge, but explicitly connecting to workforce
- Engaging students in awareness of or participation in entrepreneurship, apprenticeships, internships, or mentoring
Broadening participation is more than just working with underserved or underrepresented populations.

• How will you specifically recruit and retain these populations?

• How does the design of the innovation specifically address these populations?

• In what ways are you conceptualizing and leveraging the assets that these populations bring to the table?
Strategic Partnerships

Examples of partners:

• Colleges and universities (particularly HBCU, HSI, MSI, and tribal colleges)

• Businesses

• Libraries, museums, and other places of informal learning

Proposals should describe how the strategic partners are integrated into the work and how they will engage learners and educators through project activities.
Solicitation-Specific Review Criteria

To what extent does the proposal

• include explicit and adequate strategies for recruiting and selecting participants

• describe approaches to address diversity, access, equity, and inclusion

• describe research-informed instructional approaches to build on strengths and challenges

• explain how innovations with technology are developmentally and age-appropriate

Note: consider highlighting a section of the proposal to discuss the Solicitation-Specific Criteria.
Reminders and Resources

Reminders
- ITEST Proposals **must** be submitted via Research.gov (NSF’s Fastlane no longer used)
- Make sure to register with Research.gov
- Submit early

Resources
- STELAR Resource Center: stelar.edc.gov
- Nsf.gov for award search and much other information
Online Resources

NSF Advanced Award Search:  
www.nsf.gov/awardsearch/advancedSearch.jsp

Secret Information: Element Codes
- ECR: 7980
- DRK-12: 7645
- ITEST: 7227
- STEM+C: 005Y
- AISL: 7259

General inquiries regarding this program and program solicitation should be made to:

DRLTEST@nsf.gov

What should you do if you have a specific inquiry regarding your project or proposal?

Using the email address above, in the body of the email or as in attachment, send a brief (max 2 pages) summary of the research or R&D you are planning to conduct. The synopsis should include a very brief rationale for the work, how it will contribute to the knowledge base on informal learning, and what you believe the broader impacts to be. Be sure to also include your specific questions.
**NSF Important Notice: Research.gov is now required for submission of ITEST proposals**
