

***Mark your calendars for an online workshop to learn about NSF funding for research & development efforts in support of equitable approaches to preK-12 STEM education!***

## **NSF ITEST Program Online Workshop for Kentucky & West Virginia Tuesday, June 4, 1–3 pm ET**

Dear STEM Education Colleagues,

The National Science Foundation's (NSF) **Innovative Technology Experiences for Students and Teachers (ITEST)** program invites **you** to learn more about how it funds applied research and development that advances the equitable and inclusive integration of technology in formal and informal learning environments for preK-12 youth. The program is particularly interested in engaging with STEM education researchers and STEM education program developers in your states.

During the two-hour online workshop, participants will engage with examples of funded projects, and engage in small group consultation with colleagues and NSF Program Officers. Attendees will also review a rich set of proposal development resources with members of the STEM Learning and Research Center (STELAR), the resource center serving ITEST.

This workshop is designed for education researchers, formal and informal educators, and their collaborators. ITEST welcomes proposals from universities, museums, community colleges, school districts, community organizations and non-profits.

Please share this event with your colleagues and we hope to see you there!

**Registration is required by **Friday, May 31.****

*Note: We ask that all attendees **watch a 35-minute recording** of the NSF 22-585 ITEST Proposal Solicitation webinar prior to attending the workshop.*
